

BACKTEST PERFORMANCE COMPARISON

Causal A-F and A-H return, win-rate, and drawdown comparison

Complete aggregate export: 384 screen-parameter rows, 5,626 parameter-security outcomes, and 192 parameter sets per screen.

Balanced ranking gives equal weight to average return, median return, win rate, and average drawdown. It is a comparison aid, not a significance test or a production recommendation.

Executive Summary

- A-F: the leading sample-filtered balanced candidate is ID 3 (ag2_qg2_ay2_qc2_vr3_vd2), with 36 outcomes, 44.34% average return, 17.61% median return, 77.78% win rate, and -16.05% average drawdown.
- A-H: the leading sample-filtered balanced candidate is ID 147 (ag3_qg3_ay2_qc2_vr3_vd2), with 17 outcomes, 21.83% average return, 12.85% median return, 76.47% win rate, and -16.18% average drawdown.
- Compare A-F and A-H separately because their confirmation timing and actionable entry dates differ.
- Prefer candidates with adequate sample size and stable median performance over tiny-sample leaders.

Screen Overview

Screen	Sets	Outcomes	First signal	Last entry	Min N	Eligible sets
A-F	192	3,698	2022-01-26	2026-05-28	30	46
A-H	192	1,928	2022-01-26	2026-06-05	15	50

A-F Balanced Ranking

Eligibility threshold: at least 30 outcomes. Higher average return, median return, win rate, and less-negative average drawdown rank better.

Rank	ID	N	Avg return	Median	Win rate	Drawdown	Max return
1	3	36	44.34%	17.61%	77.78%	-16.05%	64.42%

Interpretation and Next Checks

- Inspect yearly and regime-level stability before choosing a parameter set; aggregate performance can hide deterioration.
- Review return distributions, worst outcomes, liquidity, transaction costs, and overlapping positions.
- Average drawdown is the mean of per-selection drawdowns, not portfolio-level maximum drawdown.
- Parameter sets reuse many securities and dates, so simple rank differences do not establish statistical significance.
